Stdio.h

利用 linux 下的標準路徑找到 stdio.h 的位置:usr/include。需打開終端機,輸入 cd /usr/include,進到此目錄,再輸 ls –a 便會列出/usr/include 的檔案列表找到 stdio.h 檔。

```
root@rmw-VirtualBox: /usr/include
                                                               Q =
rmw@rmw-VirtualBox:~$
 mw@rmw-VirtualBox:~$ cd /usr/include
rmw@rmw-VirtualBox:/usr/include$ ls -a
                              memory.h
                                               pwd.h
                                                               sysexits.h
             fmtmsg.h
                                                               syslog.h
aio.h
             fnmatch.h
                              mntent.h
                                                               tar.h
                              monetary.h
                                               re_comp.h

                                               sudo_plugin.h
             math.h
                              pthread.h
```

打 sudo –i 進到 root 裡,輸入 cd /usr/include,再輸入 rm stdio.h,刪除

檔案。

```
rmw@rmw-VirtualBox:/usr/include$ sudo -i
[sudo] password for rmw:
root@rmw-VirtualBox:~#
root@rmw-VirtualBox:~# cd /usr/include
root@rmw-VirtualBox:/usr/include# rm stdio.h
root@rmw-VirtualBox:/usr/include#
```

重新嘗試編譯並執行 test.c 檔,則因無 stdio.h 檔案而無法執行。

```
rmw@rmw-VirtualBox:~$ ls -a
. .bash_logout Desktop .local Public test.c
.. .bashrc Documents Music .ssh Videos
a .cache Downloads Pictures .sudo_as_admin_successful
a.out .config .gnupg .profile Templates
rmw@rmw-VirtualBox:~$ gcc test.c -o a
test.c:1:10: fatal error: stdio.h: No such file or directory

1 | #include <a href="mailto:stdio.h">stdio.h</a>
Compilation terminated.
